Constructor Warehouse Intelligence System (C-WIS) is a software platform that works with any existing WMS or ERP system and provides you with an actual insight into capacity and capital binding. By processing data from your systems, combined with additional business information, C-WIS carries out complex calculations of your stocks balance and warehouse logistics with specific proposals for changes.

C-WIS is the market's first and only warehouse intelligence system capable of using these vital metrics to categorise stock items in this way and improve efficiency. The suggested improvements can be as simple as amending stock locations or changing your buying patterns, which if done correctly can have significant benefits.
